

By providing news and weather reports all over the country XM and other satellite radio services enable those who live in areas of the country that do not have the benefit of 24 hour news stations to get current news and weather reports while driving. This is a service I pay for. I do not have to listen to ccommercials. This is a service that the NAB should not be allowed to try and stop. It goes against the principle that one is allowed to listen to whatever one wants. It is called freedom of speech.
